

**APPENDIX 3
TO
PLAN OF WATER MANAGEMENT
FOR
SPECIAL IMPROVEMENT DISTRICT NO. 1 OF THE RIO GRANDE WATER
CONSERVATION DISTRICT**

SUBDISTRICT NO. 1 WELL DATABASE

Subdistrict #1 Well Database

The Subdistrict #1 Well Database has been compiled by the Division of Water Resources (DWR) to comply with the Court's request to include a list of Subdistrict wells in an appendix to the Plan of Management. The data accumulated for the database comes from several sources and must be cross-referenced to report all the fields requested. With the implementation of the DWR well metering program in Division 3, there has been an effort to consolidate the separate data sources to more easily access the information needed. This effort will continue to improve the reliability of the data.

This is the first time such a comprehensive collection of well information has been compiled for Subdistrict #1 wells. As such, the database is considered a draft and will continue to be updated. The following describe how some of the database items are interpreted for the time being:

1. **Duplicate WDIDs:** The WDID for a well represents a unique structure. However, there are many duplicate WDIDs in the database supplied by DWR. As mentioned, the data accumulated for the database comes from several sources and must be cross-referenced to report all the fields requested. If there is any different data in a field, the query used returns a separate row for each.

For example, a particular well may have an owner and a contact listed under the Display Name field, so the record appears twice. There could be several adjudication dates, appropriation dates, receipt numbers, etc. for the same well. All of these circumstances will result in duplicate records.

2. **Abandoned Wells:** When a well is abandoned by the court, DWR receives a well abandonment affidavit. The date the affidavit is received is noted in the well records. When the well that has been abandoned is plugged, the date is also noted in the well records. If either of these two date fields is populated in the Subdistrict #1 Well Database, it will be assumed that the well is abandoned.
3. **Augmentation Plan Wells:** We can not clearly identify from the data in this database the wells that are included in a separate augmentation plan. DWR can provide a list of the well WDIDs associated with the augmentation plan lands that are found within the Subdistrict #1 boundary. The Subdistrict will need to maintain this list separate from the Subdistrict wells as part of their normal bookkeeping.
4. **Non-Subdistrict Wells:** The well list includes wells that lie within the Subdistrict boundary, but were not originally included in the Subdistrict. These wells were required to be metered, but did not fit the definition for inclusion in the Subdistrict. Some of the wells are municipal wells and those belonging to government (tax-exempt) entities. Lands included in the Subdistrict were those that the county records indicated were agricultural and would have, by definition, omitted municipal, commercial, or tax-exempt. We will identify these wells by their "Use" code, if possible, and/or by a combination of their location on the map and their Display Name, if necessary.

Explanation of Columns in Well Database

1. **WDID:** Well structure number. This is a unique identifier for the well that is recognized throughout the State. The WD or Water District in which the well is located is the first two digits of the WDID, the ID or unique number that represents the structure is the right five digits.
2. **Structure Name:** Decree or Permit number. If the well has a decree associated with it, this field will show the water court decree case number. If the well does not have a decree, the well permit number will be shown.
3. **Receipt:** When a well permit is issued, all the forms and documentation for the well are assigned a common Receipt Number so the data can be kept together. A well permit number is not necessarily unique within the State. Identical well permit numbers may have been assigned to different wells located in different areas of the State.
4. **UTM_x/UTM_y:** Hydrobase UTM's. These are the coordinates of the well location that are stored in the Division of Water Resources (DWR) Hydrobase database, represented in UTM, NAD83, Zone 13, meters. In most cases, the UTM coordinates were derived from the Public Land Survey legal description (Township, Range, Section, Quarter Section, Quarter-Quarter Section) or the well permit data (Township, Range, Section, distance from Section lines).
5. **X/Y:** Inventoried UTM's. These are the coordinates of the well location for those wells that have been inventoried for participation in the DWR well metering program. These well locations have been recorded using GPS equipment and are represented in UTM, NAD83, Zone 13, meters. They may not match the Hydrobase UTM's for the same well.
6. **Legal:** Hydrobase legal location: This is the location of the well as reported in the well decree or well permit. It is represented in terms of Public Land Survey descriptors, Quarter Section, Section, Township, and Range. The legal may not be available to this detail for all wells
7. **Depth:** Depth the well is completed, in feet, as displayed in DWR Hydrobase.
8. **Aquifer1:** The aquifer in which the well has been completed as displayed in DWR well permit database. The aquifer is identified by "CON" for Confined, "UNC" for Unconfined, "GW" for Ground Water which represents all unnamed aquifers, and blank for no designation.
9. **Absolute:** The absolute decreed rate (cfs) for the structure.
10. **Conditional:** The conditional decreed rate (cfs) for the structure.
11. **AP/EX Abs:** The decreed rate absolute (cfs) for alternate points and exchanges.
12. **AP/EX Cond:** The decreed rate conditional (cfs) for alternate points and exchanges.
13. **Adj Date:** Adjudication Date. Date the water right for the decreed well was settled by judicial procedure, i.e. date that the court awarded a water right.
14. **Pro Date:** Appropriation Date. The date that can be proven in a court of law from which there was an open overt act upon the land to demonstrate an intent to apply water from the decreed well for beneficial use and as awarded in the decree.
15. **Display_name:** Well owner's name. This is the owner of the well or the designated contact, as reported to DWR for the well metering program.
16. **Uses:** The decreed use(s) of the structure where 0 – storage, 1 – irrigation, 2 – municipal, 3 – commercial, 4 – industrial, 5 – recreation, 6 – fishery, 7 – fire, 8 – domestic, 9 –

stock, A – augmentation, B - export from basin, C - cumulative accretion to river, D - cumulative depletion from river, E – evaporation, F - federal reserve, G – geothermal, H - household use only, K - snow making, M - minimum streamflow, N - net effect of river, P - power generation, Q – other, R – recharge, S - export from state, T - transmountain export, W – wildlife, X - all beneficial use.

17. **P Yield:** Proposed well pumping from permit application (gpm).
18. **Yield:** Actual well pumping rate from well construction/pump report (gpm).
19. **Abr Date:** Date well abandonment affidavit received by DWR.
20. **Abco Date:** Date well plugged taken from affidavit.
21. **Status:** Active status of well. The well is either “Active” or “Inactive”. If the well is Filed Inactive, then the status is Inactive. All other wells have an Active status.

Filed Inactive means a well owner may file a Notice of Inactivation with DWR indicating that the subject well is not in use at this time, but may be used in the future. A Notice of Inactivation exempts the owner of installing a meter on the well unless or until the well is reactivated. At that time, the owner then files a Reactivation Form with DWR prior to using the well. The Notice of Inactivation must be refiled each year the well remains Inactive.

There may be wells that are Active, but have no meter. There are decreed wells with an associated water right that have been replaced by a permit, but have not gone back to water court to change the decree. A case where this may have happened is when a decreed well on the corner of a field is replaced by a permitted well at the center pivot sprinkler. In these cases, the well may be physically “plugged”, but shows up as Active with no flow meter, since the water right is still associated with the well (on the corner), but the water right is being used (at the center pivot).

22. **Meter:** Indication of whether the well has a meter. The well either has a meter and the entry is “Yes”, or it does not have a meter and the entry is “No Meter”. The wells have meters to comply with the DWR well metering program.

Explanation of Sorting of Wells into Categories

The following describe how some of the database items are sorted into different categories:

1. **Duplicate WDIDs:** The first step in sorting the records is to arrange them by WDID. Make sure all records have the same type of data format for this field. The data format was converted to text for this field before arranging them in ascending order by WDID.
2. **Abandoned Wells:** If either the affidavit abandonment receipt date field (**Abr Date**) or the abandonment plug date field (**Abco Date**) is populated in the Subdistrict #1 Well Database, it is assumed that the well is abandoned. The records that have these fields populated are identified. Then, all records that have the same WDID as these are cut from the Subdistrict #1 Well list and added to the Subdistrict #1 Abandoned Wells list. It

is important to remove all records with the same WDID even though these data fields may be populated for only one or more of the records under that WDID.

- 3. Augmentation Plan Wells:** DWR provided a list of the well WDIDs associated with the augmentation plan lands that are found within the Subdistrict #1 boundary. Records with WDIDs matching those on the augmentation plan list are cut from the Subdistrict #1 Well list and added to the Subdistrict #1 Augmentation Plan Wells list.

Note: There are structures listed in augmentation plan wells list that do not appear on the master Subdistrict #1 well list. The wells, when plotted, lie within the Subdistrict #1 boundary. In Hydrobase, it may be that these wells are listed with a flow rate of 0 cfs/gpm, so they may have been excluded for that reason.

- 4. Non-Subdistrict Wells:** The “Use” code is “1” (irrigation) or blank for all the wells in the list. Any non-Subdistrict wells will be identified by a combination of their location on the map and their Display Name. Records with WDIDs for non-Subdistrict wells are cut from the Subdistrict #1 Well list and added to the Subdistrict #1 non-Subdistrict Wells list.

Search spreadsheet for words like: school, town, city, CSU, state, Colorado, etc, to identify non-Subdistrict wells.

- 5. Active/Inactive Wells:** The remaining wells in the list are sorted by their **Status** (Active or Inactive). Records with WDIDs for Inactive wells are cut from the Subdistrict #1 Well list and added to the Subdistrict #1 Inactive Wells list.

Note: There are Inactive wells that have meters as indicated in the field, **Meter** (Yes or No Meter). Some producers installed meters on “inactive” wells so that if they chose to change the status of the well to “active”, they would not have to wait to install and certify the meter.
